7
Keep unit and bottle vertical while screw the bottle into base counterclockwise

8
Flip device as shown, reattach cap

9
Close the cap clockwise

10
Device is ready. Follow instructions on your right

Operations

The device is a dual-purpose dispersion system:
A rapid, light touch of the power button enables the selection of operation modes.
The Green LED should flash once before entering mode one and twice for mode 2

Mode 1: Continuous dispersion

The device operates as an electronic fogger where a fast cleaning of contaminated areas is desired. Fog the area for about 30 seconds by pointing the device vertically to the floor in all directions of your room/vehicle/office.

Mode 2: Automated mode

24 X 7 continuous, automatic protection of your space.
The device should momentarily disperse only once an hour for a few seconds
Using Mode 2 alone - the refill should last about 11-12 weeks.

Shutting down the device

Continued long press the power button for about 3 seconds.
The LED color should turn blank.

LED color Indications:

○ **Green** - device disperses
○ **Blue** - Idle between dispersion
○ **Red** - Recharge device - connect to the device the supplied C-type cable to a certified USB charger (not supplied)
○ **Blue & Red** - The device is properly recharging.

When LED is Green, but the device does not disperse, the refill's tank is empty. REPLACE REFILL
